LET US GIVE YOU A  
LIFT UP!

MANUFACTURING  
ALUMINUM GANTRY  
CRANES SINCE 1997

ALL-TERRAIN  
GANTRY

1,000, 2,000, 4,000 and 6,000 lb. capacities

We brought you the All-Terrain model in 1999. Designed for rough terrain, 8.5" diameter pneumatic tires allow for easy maneuvering on uneven surfaces. We have equipped this gantry with adjustable metal support legs and pads for easy leveling. Horizontal levels are on each end of the I-Beam and bullseye levels are on each base ensuring the gantry is level before use. Its 6061 T6 structural aluminum construction makes it lightweight, yet very strong and extremely versatile for outdoor use. This gantry is often used for landscaping, repairing farm or construction equipment in the field, and many landscaping situations. This is a favorite for doing repair work to marble structures in cemeteries.

Attention: All-Terrain Gentries CANNOT be rolled while loaded. They CANNOT pick up or carry a load while on these tires. These models are designed to be level when in use. Gantry should NEVER be used when conditions are wet/muddy or when unstable ground conditions exist.
